

ANTIMICROBIALLY TREATED
MICROFIBRE CLOTHS

When using WHOOSH! Screen Shine® with W!
antimicrobial microfiber cloth, you will **remove dirt,**
bacteria and viruses from any device.

SCREEN SHINE

NON-TOXIC SCREEN AND SURFACE CLEANER

An **efficient and safe product**, developed on the
basis of advanced biotechnology and tailored
formulas, that **supports Tech Hygiene** worldwide.

One of the most effective and WHO recommended **ways to avoid transmission of a viral disease** (e.g. COVID-19) is to wash your hands thoroughly and not to touch your face.

But what about your phone that you touch and put on your face multiple times every single day?

Everything you come across will end up on your phone, tablet, laptop, glasses, and many other devices that you use all day.

The world is a breeding ground for bacteria. **For example phone** is usually covered with so many microorganisms that it is **at least 10 times dirtier than a toilet seat**.

However, **you do not need to use aggressive industrial chemicals**, which can damage patented screen coatings, to keep your phones clean.

How to clean your phone thoroughly

- **Use non-toxic, organic screen and surface cleaner WHOOSH! Screen Shine** (compatible even with all sensitive screens of Apple devices), it's easy.
- **Remove the case** before cleaning your phone to ensure your whole device is cleaned thoroughly.
- **Spray W! microfibre cloth and wipe the surface with it**, then turn the cloth over and polish the screen with the dry side of the cloth.

How often should you clean your phone?

Considering the intensity of daily use, your smartphone is almost like a third hand. Therefore, you should **clean your phone as often as you brush your teeth or wash your hands**.

MICROFIBRE CLOTHS

The W! fabric is made of high-quality woven microfibre that has been treated with antimicrobials to **prevent bacterial growth**.

The fibre is antimicrobially treated before the fabric is woven, so it **can withstand up to 40 wash cycles** ^{*}.

Also, the microfibre is very fine – 50 to 100 times thinner than a human hair. **Miniature loops allow Whoosh! to capture and hold microscopic dirt, dust and biofilms.**

It wipes off any dirt on the surface of the devices and objects that we touch multiple times a day.

WHOOSH! IS SAFE AND EFFECTIVE ON ALL DEVICES

^{*} **Wash in a washing machine** in warm or cold water using a mild detergent. **Do not use fabric softener** – it encapsulates the fibre, thus interfering with the antimicrobial effect. Air-dry (do not use the dryer). It must not be chemically cleaned or bleached.

SCREEN SHINE

Each kit contains product Screen Shine and antimicrobial microfibre cloth W!.

SAFE FOR ALL TYPES OF SCREENS

Specially designed for **cleaning, polishing and protecting** any mobile phone screen and electronic equipment. There is nothing in the composition that would damage, etch, or scratch the screens.

FINGERPRINT-RESISTANT

The patented formula leaves an antistatic, invisible nanolayer that **repels dust and resists smudges, greases and fingerprints**. It also makes it **easier to use the touch screen** even after several uses.

NON-TOXIC AND ODORLESS

The product is **safe for you, your whole family** and the environment. It does not contain harmful residues. It is alcohol-free, ammonia-free, haze-free, antistatic. Also, the composition is focused on easy removal of smudges.
